### **EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.
2. Authorization for this examiner's amendment was given in a telephone interview with Mr. Zborovsky on May 27<sup>th</sup>, 2009.

The application has been amended as follows:

- Claim 35 has been canceled.

### **REASONS FOR ALLOWANCE**

3. The following is an examiner's statement of reasons for allowance: the primary reason for allowance is the inclusion of two cooling conduits enclosed by casings and positioned within the interior of a power tool housing, with each conduit directly abutting an intake nozzle such that the conduit is closed off from the interior of the housing. The conduits extend parallel in their entirety to each other and to a longitudinal direction of the housing. The conduits remain closed off from the interior of the housing and extend from the intake nozzles to a motor housing of the power tool.
4. Regarding the prior art, Strozel et al (5,099,160) discloses two conduits 34 with two intake nozzles 30 for cooling a drive motor 14. However, Strozel's conduits are not directly abutting the intake nozzles, resulting in air flow contacting the interior of the

housing. In other words, the air flow in the conduits is not closed off from the interior of the housing; thereby components in the housing can slow down the flow.

5. Richter et al (6,758,288) discloses one conduit 8 that is closed off from an interior of the housing and extends from an intake nozzle (see figures), past a motor housing 6, and to a tool 2. While Richter shows the conduit being closed off from the housing interior by casing 8, Richter's conduit does not extend parallel to a longitudinal direction of the housing in its entirety, as it winds all around the interior of the housing. In addition, Richter only discloses one conduit with one intake nozzle.

6. Modrey (2,776,385) discloses a cooling conduit (see flow direction arrows in Fig. 1) directly abutting an intake nozzle 31. However, Modrey fails to disclose an additional casing for enclosing the conduit, therefore the conduit is not closed off from the interior of the housing. In addition, Modrey's conduit does not extend parallel to a longitudinal direction of the housing in its entirety. Modrey only discloses one intake nozzle.

7. Other prior art having cooling features disclose more than one vent, or intake nozzle, located on the exterior of a housing. However, once air flows through the intake nozzle and into an interior of the housing, the air is allowed to flow throughout the housing interior, directly contacting various components within the housing. On the other hand, if the prior art shows a conduit or tube extending through the housing and closed off from the interior, it is not entirely parallel to a longitudinal direction of the housing, and it usually has one conduit, and/or one intake nozzle.

8. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to LINDSAY M. LOW whose telephone number is (571)272-1196. The examiner can normally be reached on Monday thru Friday 7:30 to 5:00.
